16. ABSTRACT

The U.S. Environmental Protection Agency is demonstrating and evaluating the use of photochemical models. These models require accurate and complete inventory data bases. To insure that all major volatile organic compound (VOC) sources are included in emission inventory data bases, and to insure that VOC emission inventories for photochemical oxidant nonattainment areas include all sources that are subject to Resasonably Available Control Technology (RACT) , this directory of VOC sources covered by RACT requirements has been derived independently of EPA inventory data. This report is Volume 1 of a 3-volume series.

ACKNOWLEDGMENTS

PEDCo Environmental, Inc. prepared this report for the U.S. Environmental Protection Agency, Office of Air Quality Planning and Standards (OAQPS). Mr. Thomas N. Braverman was the OAQPS Task Manager. Mr. Thomas C. Ponder, Jr. served as the PEDCo Project Director, and Mr. Dilip H. Mehta served as the PEDCo Project Manager. Mr. Mehta and Dr. John E. Spessard were the principal authors.

SECTION 1

INTRODUCTION

The U.S. Environmental Protection Agency (EPA) is demonstrating and evaluating the use of photochemical models. These models require accurate and complete inventory data bases. To ensure that all major sources of volatile organic compounds (VOC) are included in emission inventory data bases and that VOC emission inventories for photochemical oxidant nonattainment areas include all sources subject to Reasonably Available Control Technology (RACT), EPA contracted with PEDCo Environmental, Inc., to prepare a directory of VOC sources covered by RACT requirements. The directory has been derived independently of current information in the National Emissions Data System (NEDS) and is presented in three volumes.

This is Volume 1 and includes the following Group 1 RACT source categories:

1. Automobile and light duty truck surface coating plants
2. Can surface coating plants
3. Coil surface coating plants
4. Fabric surface coating plants
5. Large appliance surface coating plants
6. Metal furniture surface coating plants
7. Magnet wire surface coating plants
8. Paper products surface coating plants

Sections 2 through 9 of this volume provide information on the above categories. Each section briefly describes the types and number of sources in a category. Sources are tabulated alphabetically by state and by county within each state. The name, address, county, Air Quality Control Region (AQCR), and area photochemical oxidant attainment status for each source are listed.

Volume 2 includes the following Group 2 RACT source categories:

1. Petroleum refineries
2. Chemical synthesis pharmaceutical manufacturing plants
3. Pneumatic rubber tire manufacturing plants

4. Flatwood paneling surface coating plants
5. Industrial perchloroethylene drycleaners
6. Publication rotogravure printing companies
7. Packaging rotogravure and flexographic printing companies

Volume 3 includes the following Group 3 RACT source categories:

1. Fabric printing plants
2. Polymer and resin manufacturing plants
3. Styrene butadiene rubber manufacturing plants
4. Natural gas processing plants
5. Synthetic organic chemical manufacturing plants
6. Bulk gasoline terminals

At the time this document was prepared, it was likely that EPA would drop one or more of these source categories from RACT requirements.

In compiling Volume 1 of the directory, PEDCo used the following source:

Massoglia, M. F., eta al. Demography: Plants Subject to Phase I Surface Coating Regulation. Research Triangle Institute, Research Triangle Park, North Carolina, May 1980.

SECTION 2

AUTOMOBILE AND LIGHT-DUTY TRUCK SURFACE COATING PLANTS

In this directory, automobiles include all passenger cars or passenger car derivatives capable of seating 12 or fewer passengers. Light-duty trucks include any motor vehicles rated at or below 8500 pounds gross vehicle weight, such as pickups and vans. The automobile and light-duty truck assembly industry receives parts from a variety of sources and produces finished vehicles.

A total of 47 assembly plants are located in 17 states. One plant is in an attainment area for photochemical oxidants, and 46 are in nonattainment areas. Table 2-1 summarizes the distribution of these plants by state. Following Table 2-1, the plants are listed alphabetically by state and by county within each state.

TABLE 2-1. DISTRIBUTION OF AUTOMOBILE AND LIGHT-DUTY TRUCK SURFACE COATING PLANTS BY STATE.

SECTION 3

CAN SURFACE COATING PLANTS

Cans are made by two different methods. A three-piece can is made from a rectangular sheet (body blank) and two circular ends. The metal sheet is rolled into a cylinder and soldered, welded, or cemented at the seam. One end is attached before the can is filled, and the other end is attached afterwards. A two-piece can is drawn and wall-ironed from a shallow cup; thus only one end needs to be attached to the can after it is filled with product.

Can manufacturing plants vary considerably in size. Some plants only coat metal sheets; others fabricate three-piece cans from the coated sheets. Some fabricate and coat only two-piece cans, and others coat and fabricate only can ends. Many plants perform combinations of these processes.

A total of 273 can surface coating plants are located in 36 states. There are 65 plants in attainment areas for photochemical oxidants and 208 plants in nonattainment areas. Table 3-1 summarizes the distribution of these plants by state. Following Table 3-1, the plants are listed alphabetically by state and by county within each state.

SECTION 4

COIL SURFACE COATING PLANTS

Coil coating is the coating of any flat metal sheet or strip that comes in rolls or coils. The metal is typically roll coated on one or both sides in a continuous production line. It may also be printed or embossed. The coated metal is slit and fabricated into finished products by drawing, stamping, roll-forming, or other shaping operations. The industry coats various metals, including aluminum alloy, steel, plated steel, steel alloys, zinc, brass, and copper.

A total of 60 coil surface coating plants are located in 21 states. There are 11 plants in attainment areas for photochemical oxidants and 49 plants in nonattainment areas. Table 4-1 summarizes the distribution of these plants by state. Following Table 4-1, the plants are listed alphabetically by state and by county within each state.

TABLE 4-1. DISTRIBUTION OF COIL SURFACE COATING PLANTS BY STATE.

SECTION 5

FABRIC SURFACE COATING PLANTS

Fabric coating involves use of a knife or roller spreader to coat a textile substrate and thus alter the appearance of the textile or impart such properties as strength, stability, and water or acid repellency. Coated textiles include industrial and electrical tapes, tire cord, utility meter seals, imitation leathers, tarpaulins, shoe material, and upholstery fabrics.

A total of 184 fabric surface coating plants are located in 25 states. There are 86 plants in attainment areas for photochemical oxidants and 98 plants in nonattainment areas. Table 5-1 summarizes the distribution of these plants by state. Following Table 5-1, the plants are listed alphabetically by state and by county within each state.

SECTION 6

LARGE APPLIANCE SURFACE COATING PLANTS

In this directory, large appliances include residential and commercial washers, dryers, ranges, refrigerators, freezers, water heaters, dishwashers, trash compactors, air conditioners, and other similar products. Coatings for each type of appliance require special properties because each appliance is exposed to different corrosive environments. The coatings must be durable and must adhere well to the appliance.

A total of 110 large appliance surface coating plants are located in 29 states. There are 37 plants in attainment areas for photochemical oxidants and 73 plants in nonattainment areas. Table 6-1 summarizes the distribution of these plants by state. Following Table 6-1, the plants are listed alphabetically by state and by county within each state.

TABLE 6-1. DISTRIBUTION OF LARGE APPLIANCE SURFACE COATING PLANTS BY STATE.

State	Number of plants in photochemical oxidants area	
	Attainment	Nonattainment
Alabama	2	1
Arkansas	2	0
California	0	11

SECTION 7

METAL FURNITURE SURFACE COATING PLANTS

In this directory, metal furniture includes any piece of furniture made entirely of metal and any metal furniture part assembled with other metal, wood, fabric, plastic, or glass parts. Metal furniture is manufactured for both indoor and outdoor use, and includes business furniture, institutional furniture, and household furniture. Business and institutional furniture is manufactured for use in hospitals, schools, athletic stadiums, restaurants, laboratories, institutions, and offices. Household metal furniture is manufactured mostly for home use.

A total of 191 metal furniture surface coating plants are located in 34 states. There are 59 plants in attainment areas for photochemical oxidants and 132 plants in nonattainment areas. Table 7-1 summarizes the distribution of these plants by state. Following Table 7-1, the plants are listed alphabetically by state and by county within each state.

TABLE 7-1. DISTRIBUTION OF METAL FURNITURE SURFACE COATING PLANTS BY STATE.

State	Number of plants in photochemical oxidants area	
	Attainment	Nonattainment
Alabama	3	2
Arkansas	6	0
California	0	18
Connecticut	0	2
Delaware	1	0
Florida	0	1
Georgia	3	2

SECTION 8

MAGNET WIRE SURFACE COATING PLANTS

Magnet wire coating is the process of applying a coating of electrically insulating varnish or enamel to aluminum or copper wire for use in electrical machinery. Magnet wire is used to carry an electrical current and thus create an electromagnetic field in such equipment as electric motors, generators, and transformers. The wire coating must meet rigid electrical, thermal, and abrasion-resistance specifications.

A total of 26 magnet wire surface coating plants are located in 11 states. There are 7 plants in attainment areas for photochemical oxidants and 19 plants in nonattainment areas. Table 8-1 summarizes the distribution of these plants by state. Following Table 8-1, the plants are listed alphabetically by state and by county within each state.

SECTION 9

PAPER PRODUCTS SURFACE COATING PLANTS

Paper is coated with water-borne, organic solvent-borne, or solventless extrusion materials for a variety of decorative and functional purposes. The organic solvent-borne coating process is an air pollution concern because it is a source of hydrocarbon emissions. Products that are coated with organic solvents include adhesive tapes, adhesive labels, various types of paper, book covers, typewriter ribbons, and photographic films.

A total of 101 paper products surface coating plants are located in 31 states. There are 30 plants in attainment areas for photochemical oxidants and 71 plants in nonattainment areas. Table 9-1 summarizes the distribution of these plants by state. Following Table 9-1, the plants are listed alphabetically by state and by county within each state.
